# DoSS Summer Bootcamp Probability Module 6

Ichiro Hashimoto

University of Toronto

July 20, 2023

# Recap

#### Learnt in last module:

- Moments
  - $\triangleright~$  Expectation, Raw moments, central moments
  - Moment-generating functions
- Change-of-variables using MGF
  - Gamma distribution
  - Chi square distribution
- Conditional expectation
  - $\,\triangleright\,$  Law of total expectation
  - $\,\triangleright\,$  Law of total variance

# Outline

#### • Covariance

- ▷ Covariance as an inner product
- Correlation
- ▷ Cauchy-Schwarz inequality
- $\,\triangleright\,$  Uncorrelatedness and Independence

### Concentration

- ▷ Markov's inequality
- Chebyshev's inequality
- Chernoff bounds

Recall the property of expectation:

 $\mathbb{E}(X+Y)=\mathbb{E}(X)+\mathbb{E}(Y).$ 

< □ ▶ < □ ▶ < ■ ▶ < ■ ▶ < ■ ▶ July 20, 2023 4/1

#### Recall the property of expectation:

$$\mathbb{E}(X+Y)=\mathbb{E}(X)+\mathbb{E}(Y).$$

What about the variance?

$$Var(X + Y) = \mathbb{E}(X + Y - \mathbb{E}(X) - \mathbb{E}(Y))^{2}$$
  
=  $\mathbb{E}(X - \mathbb{E}(X))^{2} + \mathbb{E}(Y - \mathbb{E}(Y))^{2} + 2\mathbb{E}((X - \mathbb{E}(X))(Y - \mathbb{E}(Y)))$   
=  $Var(X) + Var(Y) + 2\underbrace{\mathbb{E}((X - \mathbb{E}(X))(Y - \mathbb{E}(Y)))}_{?}$ 

#### Intuition:

A measure of how much X, Y change together.

< □ ▶ < □ ▶ < ■ ▶ < ■ ▶ < ■ ▶ = つへで July 20, 2023 5/1

#### Intuition:

A measure of how much X, Y change together.

#### Covariance

For two jointly distributed real-valued random variables X, Y with finite second moments, the covariance is defined as

$$Cov(X, Y) = \mathbb{E}((X - \mathbb{E}(X))(Y - \mathbb{E}(Y))).$$

#### Simplification:

 $Cov(X, Y) = \mathbb{E}(XY) - \mathbb{E}(X)\mathbb{E}(Y).$

#### **Properties:**

- $Cov(X, X) = Var(X) \ge 0;$
- Cov(X, a) = 0, a is a constant;
- Cov(X, Y) = Cov(Y, X);
- Cov(X + a, Y + b) = Cov(X, Y);
- Cov(aX, bY) = abCov(X, Y).

#### **Properties:**

- $Cov(X, X) = Var(X) \ge 0;$
- Cov(X, a) = 0, a is a constant;
- Cov(X, Y) = Cov(Y, X);
- Cov(X + a, Y + b) = Cov(X, Y);
- Cov(aX, bY) = abCov(X, Y).

## Corollary about variance:

$$Var(aX+b) = a^2 Var(X).$$

#### Relate covariance to inner product:

#### Inner product (not rigorous)

Inner product is a operator from a vector space V to a field F (use  $\mathbb{R}$  here as an example):  $\langle \cdot, \cdot \rangle : V \times V \to \mathbb{R}$  that satisfies:

- Symmetry: < *x*, *y* >=< *y*, *x* >;
- Linearity in the first argument:  $\langle ax + by, z \rangle = a \langle x, z \rangle + b \langle y, z \rangle$ ;
- Positive-definiteness:  $\langle x, x \rangle \ge 0$ , and  $\langle x, x \rangle = 0 \Leftrightarrow x = 0$

#### Relate covariance to inner product:

#### Inner product (not rigorous)

Inner product is a operator from a vector space V to a field F (use  $\mathbb{R}$  here as an example):  $\langle \cdot, \cdot \rangle : V \times V \to \mathbb{R}$  that satisfies:

- Symmetry: < *x*, *y* >=< *y*, *x* >;
- Linearity in the first argument:  $\langle ax + by, z \rangle = a \langle x, z \rangle + b \langle y, z \rangle$ ;
- Positive-definiteness:  $\langle x, x \rangle \ge 0$ , and  $\langle x, x \rangle = 0 \Leftrightarrow x = 0$

#### Remark:

Covariance defines an inner product over the quotient vector space obtained by taking the subspace of random variables with finite second moment and identifying any two that differ by a constant.

#### Properties inherited from the inner product space

Recall in Euclidean vector space:

• 
$$< x, y >= x^{\top} y = \sum_{i=1}^{n} x_i y_i;$$

• 
$$||x||_2 = \sqrt{\langle x, x \rangle};$$

• 
$$< x, y >= ||x||_2 \cdot ||y||_2 \cos(\theta).$$

Respectively:

• 
$$< X, Y >= Cov(X, Y);$$

• 
$$||X|| = \sqrt{Var(X)};$$

## A substitute for $\cos(\theta)$ :

## Correlation

For two jointly distributed real-valued random variables X, Y with finite second moments, the correlation is defined as

$$Corr(X, Y) = \rho_{XY} = \frac{Cov(X, Y)}{\sqrt{Var(X) \cdot Var(Y)}}.$$

## A substitute for $cos(\theta)$ :

### Correlation

For two jointly distributed real-valued random variables X, Y with finite second moments, the correlation is defined as

$$Corr(X, Y) = \rho_{XY} = \frac{Cov(X, Y)}{\sqrt{Var(X) \cdot Var(Y)}}.$$

**Uncorrelatedness:** 

$$X, Y$$
 uncorrelated  $\Leftrightarrow$   $Corr(X, Y) = 0.$ 

## Cauchy-Schwarz inequality

$$|Cov(X, Y)| \leq \sqrt{Var(X)Var(Y)}.$$

**Proof:** 

< □ ▶ < □ ▶ < ■ ▶ < ■ ▶ < ■ ▶ < ■ ▶ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■ ♪ < ■

#### **Uncorrelatedness and Independence:**

Observe the relationship:

 $Corr(X, Y) = 0 \quad \Leftrightarrow \quad Cov(X, Y) = 0 \quad \Leftrightarrow \quad \mathbb{E}(XY) = \mathbb{E}(X)\mathbb{E}(X)$ 

#### **Uncorrelatedness and Independence:**

Observe the relationship:

 $Corr(X, Y) = 0 \quad \Leftrightarrow \quad Cov(X, Y) = 0 \quad \Leftrightarrow \quad \mathbb{E}(XY) = \mathbb{E}(X)\mathbb{E}(X)$ 

#### **Conclusions:**

- Independence  $\Rightarrow$  Uncorrelatedness
- Uncorrelatedness  $\neq \Rightarrow$  Independence

#### **Remark:**

Independence is a very strong assumption/property on the distribution.

#### Special case: multivariate normal

### Multivariate normal

A k-dimensional random vector  $\mathbf{X} = (X_1, X_2, \cdots, X_k)^{\top}$  follows a multivariate normal distribution  $\mathbf{X} \sim \mathcal{N}(\boldsymbol{\mu}, \boldsymbol{\Sigma})$ , if

$$f_{\mathbf{X}}(x_1,\ldots,x_k) = \frac{\exp\left(-\frac{1}{2}(\mathbf{x}-\boldsymbol{\mu})^{\mathrm{T}}\boldsymbol{\Sigma}^{-1}(\mathbf{x}-\boldsymbol{\mu})\right)}{\sqrt{(2\pi)^k|\boldsymbol{\Sigma}|}},$$

where  $\boldsymbol{\mu} = \mathbb{E}[\mathbf{X}] = (\mathbb{E}[X_1], \mathbb{E}[X_2], \dots, \mathbb{E}[X_k])^\top$ , and  $[\mathbf{\Sigma}]_{i,j} = \Sigma_{i,j} = Cov(X_i, X_j)$ .

#### **Observation:**

The distribution is decided by the covariance structure.

$$X_i, i = 1, \dots k \text{ independent} \Leftrightarrow f_{\mathbf{X}}(x_1, \dots, x_k) = \prod_{i=1}^k f_{X_i}(x_i)$$
  
 $\Leftrightarrow \mathbf{\Sigma} = I_k \Leftrightarrow Cov(X_i, X_j) = 0, i \neq j.$ 

#### Example:

• Corr(X, Y) = 0

< □ ▶ < □ ▶ < ■ ▶ < ■ ▶ < ■ ▶ < ■ ▶ 3 Q @ July 20, 2023 13/1

$$X_i, i = 1, \dots k \text{ independent} \Leftrightarrow f_{\mathbf{X}}(x_1, \dots, x_k) = \prod_{i=1}^k f_{X_i}(x_i)$$
  
 $\Leftrightarrow \mathbf{\Sigma} = I_k \Leftrightarrow Cov(X_i, X_j) = 0, i \neq j.$ 

## Example:

• 
$$Corr(X, Y) = 0.7$$

< □ ▶ < □ ▶ < ■ ▶ < ■ ▶ < ■ ▶ < ■ ▶ 3 Q @ July 20, 2023 13/1

$$X_i, i = 1, \dots k \text{ independent} \Leftrightarrow f_{\mathbf{X}}(x_1, \dots, x_k) = \prod_{i=1}^k f_{X_i}(x_i)$$
  
 $\Leftrightarrow \mathbf{\Sigma} = I_k \Leftrightarrow Cov(X_i, X_j) = 0, i \neq j.$ 

## Example:

• 
$$Corr(X, Y) = -0.7$$

## **Concentration inequalities:**

- Markov inequality
- Chebyshev inequality
- Chernoff bounds

## **Concentration inequalities:**

- Markov inequality
- Chebyshev inequality
- Chernoff bounds

## Markov inequality

Let X be a random variable that is non-negative (almost surely). Then, for every constant a > 0,

$$\mathbb{P}(X \ge a) \le rac{\mathbb{E}(X)}{a}.$$

#### **Proof:**

## Markov inequality (continued)

Let X be a random variable, then for every constant a > 0,

$$\mathbb{P}(|X| \geq a) \leq rac{\mathbb{E}(|X|)}{a}.$$

### A more general conclusion:

## Markov inequality (continued)

Let X be a random variable, if  $\Phi(x)$  is monotonically increasing on  $[0, \infty)$ , then for every constant a > 0,

$$\mathbb{P}(|X| \geq a) = \mathbb{P}(\Phi(|X|) \geq \Phi(a)) \leq rac{\mathbb{E}(\Phi(|X|))}{\Phi(a)}.$$

#### Chebyshev inequality

Let X be a random variable with finite expectation  $\mathbb{E}(X)$  and variance Var(X), then for every constant a > 0,

$$\mathbb{P}(|X - \mathbb{E}(X)| \ge a) \le rac{Var(X)}{a^2},$$

or equivalently,

$$\mathbb{P}(|X - \mathbb{E}(X)| \ge a\sqrt{Var(X)}) \le \frac{1}{a^2}.$$

#### **Example:**

Take a = 2,

$$\mathbb{P}(|X - \mathbb{E}(X)| \ge 2\sqrt{Var(X)}) \le \frac{1}{4}$$

<ロ > < 回 > < 目 > < 目 > < 目 > < 目 > 目 の Q () July 20, 2023 17/1

## Chernoff bound (general)

Let X be a random variable, then for  $t \ge 0$ ,

$$\mathbb{P}(X \geq a) = \mathbb{P}(e^{t \cdot X} \geq e^{t \cdot a}) \leq rac{\mathbb{E}\left[e^{t \cdot X}
ight]}{e^{t \cdot a}},$$

and

$$\mathbb{P}(X \ge a) \le \inf_{t \ge 0} \frac{\mathbb{E}\left[e^{t \cdot X}\right]}{e^{t \cdot a}}.$$

#### **Remark:**

This is especially useful when considering  $X = \sum_{i=1}^{n} X_i$  with  $X_i$ 's independent,

$$\mathbb{P}(X \ge a) \le \inf_{t \ge 0} \frac{\mathbb{E}\left[\prod_i e^{t \cdot X_i}\right]}{e^{t \cdot a}} = \inf_{t \ge 0} e^{-t \cdot a} \prod_i \mathbb{E}\left[e^{t \cdot X_i}\right].$$

## **Problem Set**

# Problem 1: Let $f_{X,Y}(x,y) = \begin{cases} 2 & 0 \le y \le x \le 1 \\ 0 & \text{otherwise} \end{cases},$ compute Cov(X, Y). Problem 2: For $X \sim \mathcal{N}(0, 1)$ , compute the Chernoff bound.
